CITY OF CHINO HILLS READY FOR MAJOR WATER PIPELINE SHUTDOWN APRIL 23 – 28

Chino Hills, CA – Water officials at the City of Chino Hills are ready for the shutdown of Metropolitan Water District (MWD) of Southern California's Rialto Pipeline. State Department of Water Resources will make repairs to a State portion of the pipeline during the outage, scheduled from Monday, April 23 to Friday, April 28. This line typically provides approximately 15 percent of the City's potable water supply.

"Since its incorporation, the City has developed water supplies from several sources, which improves our ability to continue to deliver water during pipeline repairs or other external factors," said Nadeem Majaj, Public Works Director. "However, if our residents take a few extra steps to reduce their water use during the pipeline shutdown, we would appreciate their efforts."

Residents are also invited to check the City's Water Conservation website page, at www.chinohills.org/WaterConservation, for water-saving tips.
